The road was closed and the Contractor began the Grant 13 project on Tuesday, March 14th. Despite weather events towards the end of the week the Contractor was able to get the site cleared and grubbed, temporary stream diversion channel dug, and began removing the existing bridge. They anticipate that it will take a couple weeks to get the site shaped up and culvert excavation completed.

Last week at the Grant 11 site, despite a wet end to the week, the crew burnt bush piles on site, installed the temporary stream crossing, excavated both east and west abutment footings to grade, shaped abutment berm slopes, surveyed and laid out pile foundations at both east and west abutments, hauled initial pile lengths to site for east pier and abutment, moved and assembled the crane at site, hauled piling driving equipment to site. This week, weather depending, the plan is to start driving piling at the east abutment, weld on and drive piling extensions at east abutment, drive pile at east pier, weld on and drive piling extensions at east pier, and begin tying steel reinforcing cage for east abutment.
